

# Mediatrix MAILROOM

Fact Sheet/Last Updated: 07/2009

As an advanced 3-step J2EE solution, Mediatrix MAILROOM is completely platform-independent and well suited for integration into an existing or future system architecture (client and server). Aside from its integration potential and little system requirements, certainly one of Mediatrix MAILROOM most outstanding features is that it runs resource-efficiently.

Specific requirements for the system environment depend on the document volume to be processed, the average file size, complexity of work flows as well as what is required to ensure high availability and stability. We recommend the following minimum system requirements regardless:

### MEDIATRIX MAILROOM CLIENT

Processor:	2 GHz
RAM:	512 MB RAM available
Harddisc:	50 MB HD available
Supported OS:	Windows (XP, Vista), Linux, Mac OS X
Java:	JRE 1.5 or newer

### MEDIATRIX MAILROOM APPLICATION SERVER

Processor:	2 x Quad-Core preferred
RAM:	16 GB RAM
Harddisc:	50 GB HD available
Supported OS:	Windows (2003 Server, 2008 Server) 64bit, Linux 64 bit
Java:	JRE 1.5 or newer

### MEDIATRIX MAILROOM DATABASE

MySQL:	Version 5.1 or newer
Oracle:	Versions 10.2 and newer
SQL Server:	Versions 2000 and newer
We recommend a clustered Database
